Plan: Internal structure is XHTML2

Table of contents

1 Overview

The internal document structure currently uses document-v13 and this is due to become XHTML2.

See the parent issue: [FOR-184](#) which also has links to some of the various email discussion threads.

2 Tasks

The first job is to define what needs to happen. See the email discussion: [Re: Planning the move to XHTML2](#). Ross has started to add those as subtasks for issue FOR-184.
