Upgrading to Apache Forrest 0.9-dev

Table of contents

1 Introduction

> **Note:**
> This is the **development** version of Apache Forrest. Developers can obtain it from the Subversion repository.
> See the notes for obtaining and Building Forrest.

This is a placeholder document for the new version.

2 Entities

Due to **FOR-1071** you need to either add `src/documentation/resources/schema/symbols-project-v10.ent` to your custom project or comment a section in your project `catalog.xcat`. See faq.html#sitemap-entities for more information and the benefits using entities in your project.

```
cd $YOUR_PROJECT
# The following is either or.
# a) copy an empty entity file:
cp $FORREST_HOME/main/webapp/symbols-project-v10.ent src/documentation/resources/schema/
# b) OR comment a section in src/documentation/resources/schema/catalog.xcat
vi src/documentation/resources/schema/catalog.xcat
# comment the following
<!--public publicId="-//Apache Forrest//ENTITIES Symbols Project v1.0//EN"
  uri="symbols-project-v10.ent"/-->
```
